- Help with Weight Concerns
- Decrease Heartburn & Indigestion
- Improve Range of Motion
- Eliminate/Reduce Swelling
- Reduce Allergies
- Fertility (Man and Woman)
- Improve Mind/Brain Health

Common Questions Asked

Does Acupuncture hurt?

Most patients have stated that there is little or no pain as very fine, sterile, disposable needles are used.

How deep are the needles inserted?

With a few exceptions, most acupuncture points can be stimulated on the surface, so there is no need to insert the needles deeply. There are precise indications as to the needle depth and angle of insertion for each point. These instructions have been passed down to acupuncturists for thousands of years, ensuring they practice their craft safely and effectively.

How should I prepare for treatment sessions?

Allow yourself a chance to relax. The use of alcohol, tobacco, or other drugs is also not recommended prior to or just following treatment. Please also avoid the use of perfumes, colognes or strongly scented cosmetics.
